

What is claimed is:

1. A flower ornamental assembly for accommodating a flowerpot planting flowers or directly planting flowers, comprising:

a support post having a lower part buried in the ground or fixed to the ground with a fixing device so as to be erected upward;

a flower ornament pot having at the upper end an opening for accommodating the flowerpot and having at the lower end a through-hole through which the support post is inserted; and

a tilt preventive member placed in the flower ornament pot around the support post in a situation that the support post is inserted through the through-hole of the flower ornament pot, for cooperating with the support post to erect and support the flower ornament pot.

2. The flower ornamental assembly according to claim 1,

wherein the tilt preventive member is a filler filling a surrounding of the support post inside the flower ornament pot.

3. The flower ornamental assembly according to claim 1,

wherein the tilt preventive member includes: a block body having a through-hole for penetrating the support post in the vertical direction, placed around the support post inside the flower ornament pot, and defining the inclination of the flower ornament pot within a specified range; and a buffer member filling a space between the block body, the flower ornament pot, and the support post.

4. The flower ornamental assembly according to claim 1, further comprising a height adjusting piece interposed between the flower ornament pot and the ground for adjusting a height position of the flower ornament pot.

5. The flower ornamental assembly according to claim 1, further

comprising a pedestal integrally fitted to the lower end of the flower ornament pot,

wherein the pedestal has a hollow space communicating with the through-hole of the flower ornament pot for inserting the support post.

6. A flower ornamental assembly for accommodating a flowerpot planting flowers or directly planting flowers, comprising:

a support post having a lower part buried in the ground or fixed to the ground with a fixing device so as to be erected upward; and

a flower ornament pot having at the upper end an opening for accommodating the flowerpot and having at the lower end a through-hole through which the support post is inserted,

wherein the flower ornament pot has a hollow tubular part integrally erected upward from the through-hole, and the flower ornament pot is erected and supported with the support post inserted in the tubular part.

7. The flower ornamental assembly according to claim 6, further comprising a filler filling a surrounding of the hollow tubular part.

8. A flower ornament pot for accommodating a flowerpot planting flowers or directly planting flowers, comprising:

a flower ornament pot body having at the upper end an opening for accommodating the flowerpot and having a through-hole at the lower end; and

a hollow tubular part, which receives a support post for erecting the flower ornament pot, integrally erected upward from the through-hole.
